SAP EDI and Integration Monitoring

EDI Monitoring

What is EDI Monitoring

Process of overseeing and managing exchange of electronic documents between trading partners using SAP

Why EDI Monitoring

- Enhancing business connectivity through efficient monitoring
- Ensure seamless and error-free data interchange for streamlined business process

Challenges in traditional EDI

- Limited Visibility: Lack of real-time insights into data exchange.
- Error Detection: Delayed identification and resolution of transmission errors.
- Manual Intervention: Heavy reliance on manual processes for issue resolution.

Key Components of Monitoring

IDoc Monitoring

IDoc Tracking for real-time status updates

Message Tracking

Monitoring inbound and outbound messages to ensure successful data transmission

Integration with middleware

Seamless integration scenarios with SAP PI/PO, SAP CPI

SAP EDI and Integration Monitoring

**What we
offer with EDI
Monitoring**

**Support
Model**

1. Regular Monitoring schedule

- Alert and notification to responsible team
- Would benefit business with real-time notification on any error

2. SAP Functional and Technical support

3. SAP PTP and OTC consultants along with Technical team

4. Proactive issue identification and resolution

- Issue identification based on reviewing current set-up
- Working on frequently occurring issues to resolve the errors

5. Documentation and Reporting

- Bi-weekly reports segregated by failed messages, error type and resolution

6. Regression testing during patching and upgrades

**Functional and Technical
Team – Offshore**

The Reality for Most Growing Businesses

Every day without integrated systems costs you time, money, and opportunity.

Most businesses outgrow their tools but keep patching the gaps until the gaps become the problem.

Disconnected systems

Finance, ops, and sales running in silos.

Manual processes

Hours lost to data entry, reconciliation, and chasing updates.

No real-time visibility

Blind spots in inventory, cash flow, and performance.

Misconfigured ERP

Generic setups that don't reflect how your business actually works.

Vendor lock-in

Expensive proprietary software with no flexibility or control.

Your End-to-End ERPNext Partner

We go beyond software deployment. As your dedicated ERPNext engineering partner, we own the full lifecycle, from architecture and implementation to custom development, monitoring, and continuous optimization, ensuring your system delivers real business results.

ERPNext-Native Engineering

Framework-level implementation, including custom modules, business-specific workflows, and deep technical architecture.

AI-Enhanced ERP

We integrate intelligent automation and AI capabilities directly into your ERP to drive smarter decisions and reduce manual work.

Open-Source First

100% open source ERPNext, with no vendor lock-in, full transparency, and complete control over your system and data.

Business Outcomes We Deliver

We focus on measurable results, not just going live.

30-50%

Reduction in Manual Processes

Automate repetitive tasks across procurement, billing, and reconciliation.

20-40%

Faster Order & Billing Cycles

Streamlined workflows from order to invoice to payment.

Real-Time Financial & Operational Visibility

Live dashboards across inventory, finance, and operations.

Improved Inventory Accuracy

Eliminate stockouts, reconcile across locations automatically.

Scalable Systems Built for Growth

Architecture that grows with your team, volume, and complexity.

Our Implementation Approach

A faster, smarter path to a fully integrated business.

Discover

Map workflows, identify bottlenecks, define ROI goals

01

Design

Architecture, module selection, industry workflows

02

Configure

Roles, permissions, approvals, custom features

03

Integrate

Connect ERP to existing tools, real-time sync

04

Migrate

Clean, validated legacy data from day one

05

Train

Role-based training, go-live planning

06

Optimize

Ongoing support, automation & AI integration

07

technovate.one as Your ERPNext Partner

End to end capabilities, from the first process assessment to continuous AI enhanced operations.

End-to-End Implementation

Structured deployment aligned to real business workflows, from scoping through go live.

Process Assessment & Solution Design

Identify inefficiencies, map workflows, and build an ROI-driven ERP roadmap before a single line is configured.

Industry-Specific Configurations

ERP tailored to manufacturing, retail, jewellery, healthcare, and more, not generic, out of the box setups.

Custom Module Development

Extend ERPNext with business-specific modules, custom data models, approvals, and permissions built around your operations.

API Integrations & System Connectivity

Connect CRM, POS, analytics, payment gateways, and third-party tools into one seamless data ecosystem.

Data Migration & Modernization

Clean, validate, and securely migrate legacy data, ensuring accuracy and continuity from day one.

AI Enhancements & Workflow Automation

Automate repetitive tasks, embed intelligent decision support, AI-powered analytics, and smart forecasting directly into your ERP.

Training, Support & Continuous Optimization

Ensure adoption, long-term stability, and performance gains through structured training, 24/7 support, and ongoing AI-driven improvements.

Native Engineering & AI-Enhanced ERP

ERPNext Native Engineering

Custom Module Development

Business-specific data models, workflows & permissions.

Cloud Infrastructure

Business-specific data models, workflows & permissions.

Security & Compliance

Role-based access, 2FA, audit trails, data protection.

Performance Engineering

Database tuning, query optimization, high-volume handling.

API & System Integrations

Connect ERP to CRMs, payments, e-commerce & third-party tools.

AI-Enhanced ERP Experience

Intelligent Automation

Automate approvals, alerts, data entry & routine workflows.

AI-Powered Analytics

Predictive dashboards, smart forecasting & anomaly detection.

Smart Reporting

Natural language queries & AI-generated business summaries.

Process Optimization

AI identifies bottlenecks and recommends workflow improvements.

Intelligent User Experience

Context-aware assistants inside ERP to guide and accelerate tasks.

Application Management & Monitoring

24/7 support that goes beyond ticket resolution, delivering proactive and outcome driven operations.

L1: Incident

- 24/7 service desk & triage
- SLA-driven incident resolution
- Automated ticket routing
- Escalation management

L2: Technical

- Server & configuration troubleshooting
- Database query optimization
- Background job failure analysis
- Patch & hotfix deployment

L3: Engineering

- Architecture reviews & tuning
- Version upgrade planning
- Performance optimization
- Continuous improvement roadmap

Industries We Serve

Built for your industry. Configured for your business.

Jewellery

Labor management, metal accounting, QR traceability.

Retail & POS

Multi-location, real-time stock, payment integrations.

Manufacturing

BOM, work orders, production planning, subcontracting.

Trading & Distribution

Inventory, import/export, landed costs, credit management.

Professional Services

Project tracking, timesheets, billing, CRM.

Healthcare

Appointments, patient records, OPD/IPD management.

E-Commerce

Marketplace integrations, unified order management.

Financial Services

Real-time, high-volume, regulatory-grade operations.

Education

Admissions, student records, fee management, scheduling.

The Expertise Behind Every Engagement

Our team brings together ERP architects, business analysts, developers, and managed services engineers, all working under one delivery model.

ERP Architects

Deep expertise in ERPNext configuration, module design, and scalable system architecture for complex business environments.

Business Analysts

Industry specialists who translate business requirements into ERP workflows, bridging the gap between your team and technology.

Implementation Engineers

Hands-on engineers who configure, integrate, and deploy ERP systems with minimal disruption to daily operations.

AI & Automation Experts

Specialists who embed intelligent automation and AI capabilities directly into your ERP workflows and reporting.

Managed Services Team

Dedicated support and monitoring engineers ensuring 99.9%+ uptime, proactive issue resolution, and continuous optimization.

Domain Specialists

Vertical experts in jewellery, retail, manufacturing, and more, who understand your business before touching your system.

Real Work. Real Results.

Our case studies demonstrate how Technovate.One transforms complex business operations into unified, intelligent, and scalable ERP systems.

Jewellery Manufacturing & Retail

From Pure Gold Procurement to QR-Coded Retail Sales, End-to-End

Business Challenges

- Manual gold tracking with Labors
- No traceability on finished ornaments
- Disconnected invoicing & delivery
- No standardized work order process
- Reconciling labor gold balances
- Tracking unsold ornament returns

Solution Delivered

- Custom ERPNext Jewellery implementation
- Two-step work order (Kundan → Stone/Diamond)
- Unique QR code per ornament linking purity, stones & Labor
- Automated Labor ledgers for gold + labor finance
- Sales order approval workflow with auto-invoice
- Unsold ornament return reconciliation

Business Impact

- End-to-end visibility from procurement to sale
- Accurate labor gold & financial reconciliation
- Full ornament traceability via QR codes
- Standardized manufacturing workflows
- Faster sales & billing cycles. Audit-ready financial reporting

Jewellery Manufacturing & Retail

One Unified System Across Procurement, POS, Payments & Finance

Business Challenges

- Disconnected purchasing, sales & accounting
- Manual inventory reconciliation
- No real-time stock or financial visibility
- Complex split & finance payment handling
- Difficulty generating accurate financials

Solution Delivered

- End-to-end ERPNext covering full operations
- Barcode-based POS with real-time stock updates
- Paytm, Pine Labs, split & finance payment integrations
- Automated invoicing with tax compliance
- Automated ledger postings & reconciliations
- Balance Sheet, P&L & inventory reports

Business Impact

- Unified ERP across all operations
- Faster POS billing at every location
- Accurate real-time inventory
- Automated accounting & reporting
- Scalable and audit-ready system

Why ERPNext Over the Alternatives?

	ERPNext	SAP	Odoo	NetSuite	Zoho One
Open Source	✓	✗	Partial	✗	✗
Total Cost	Low	Very High	Medium	High	Medium
Customizability	Full	Limited	Moderate	Limited	Limited
Vendor Lock-in	None	High	Medium	High	Medium
SME-Friendly	✓	✗	Partial	✗	✓
AI-Ready	✓	Add-on	Add-on	Add-on	Limited
Implementation Cost	Low	Very High	Medium	Low	Low-Med

Flexible Engagement Models

Partnerships built around your ERPNext maturity and business goals.

Technical AMS

Best for:
Businesses already on ERPNext

- Consistent monitoring & alerting
- Incident & problem management
- Patch & version upgrades
- Monthly health reports SLA-driven support tiers

Migration & Modernization

Best for:
Upgrading from legacy ERP

- Assessment & roadmap
- Legacy to ERPNext v16 upgrade
- Cloud migration
- Hypercare & stabilization
- Data migration & validation

Managed ERPNext

Best for:
Full long-term partnership

- Dedicated cross-functional team
- Proactive capacity planning
- Custom module development
- AI integration & optimization
- Quarterly business reviews

Why Act Now?

ERPNext v16 Is Here

The latest version delivers 2× performance, a redesigned interface, and enhanced manufacturing and financial modules. Businesses modernizing now gain a structural edge over competitors still on older platforms. Technovate.One is a day-one v16 partner.

Open-Source Adoption Is Accelerating

Across industries, businesses are moving away from expensive proprietary ERP licenses. ERPNext gives you enterprise grade capability, full control, and zero vendor lock in, at a fraction of the cost of SAP or NetSuite.

AI Is Reshaping Business Operations

The window to embed AI into your core business systems is now. Companies that integrate intelligent automation into their ERP today will operate with measurably lower costs and faster decision cycles tomorrow.

Let's Engineer Your ERPNext Outcomes.

Whether you are starting fresh, modernizing a legacy system, or need expert hands on support, we are ready.
